

Transport refrigeration is increasing in its importance for society, mainly because its relation to an issue that we all care for, our food quality.

In cold chain preservation, i.e. the respect of the right temperature indicated since the beginning of its process until consume, the refrigerated vehicle is considered a critical point because the products will probably be submitted to several expeditions until reaching the final consumer.

For our wellbeing, it is very important that those temperatures, indicated for products transportation, are respected.

Digifrio is proud of contributing to the accomplishment of that goal, by simultaneously trying to avoid unbearable costs to our customers, the owners of refrigeration systems vehicles.

Despite the specific characteristics of this subject, we do make sure that our processes are transparent so that our customers can be aware of their fleet maintenance services.

In new equipments sales, we make an effort to provide the most appropriated solutions for the specific needs of each client.
